Enhancing students' language and IT skills through tech-based projects

INTRODUCTION

After the influence of Covid-19 pandemic, a large number of online technology developments and the ever-growing expansion of electronic devices have provided language learners with pervasive and genuine language input. Modern technologies have supported English as a foreign languages (EFLs) to participate in the educational context of language learning (Rassaei, 2017). Lately, numerous investigations have examined the effectiveness of integrating various technologies in education to help develop student's language skills together with IT ones

RESEARCH QUESTIONS

1. How effectively does technology support language learning process?
2. What types of project should be used to integrate technology into language skill development?

RESEARCH METHOD

PARTICIPANTS

80 students at Nhi Chieu and Tu Ky High School

MATERIAL

New English Textbook

PROCEDURE

observe experiment interview

data collecting data analysis

FINDINGS

- technology helps students improve speaking skills through using apps to practice every day
- technology helps students designed well-organised posters for projects
- technology motivate students design projects' products such as poster, video clip, brochure..

TECH TOOLS

FLIPGRID

help students improve speaking skills

help design videos, clips

padlet

help share and save students' projects

help design fantastic poster for students' projects
